

How To Add Movies to the VR One Cinema:

Adding movies to the VR One Cinema app is very easy. Since you will need to save the movies to your phone, please plug the phone into your computer. After opening iTunes, select your phone at the top (Step 1), and open the Apps Menu (Step 2). If you scroll down (Step 3) you will find the VR One Cinema app listed under the “File Sharing” menu. Just select it, and either drag and drop videos into the window on the side, or click the “Add” button to search through your folders (Step 4). And that’s it! All the videos you add here will be listed under the “Movies” folder inside the app.

The VR One Cinema app can play “.mov” and “.mp4” file formats. It is also important to note that if you have a side-by-side video that is specially formatted for 3D, you can simply add the keyword “SBS” to the file name of the video, and the app will automatically show the correct content for each eye.

Enjoy an awesome virtual reality movie theater experience!
